# Описание графа друзей

# Описание графа друзей

#### Свойства

• Вершин: 138

• Ребер: 1556

• Диаметр: 5

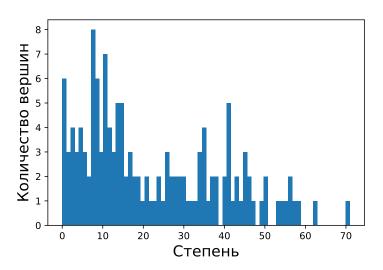

• Коэффициент кластеризации: 0.62

### Аттрибуты вершин

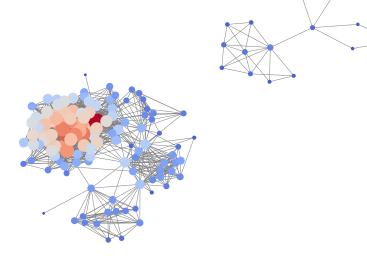

• Город

• Университет

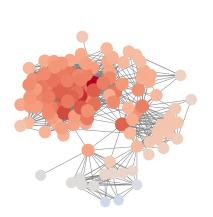

# Описание графа друзей

# Degree centralities

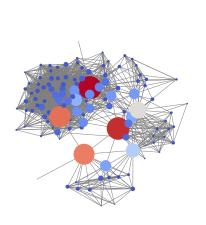

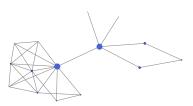

# Closeness centralities

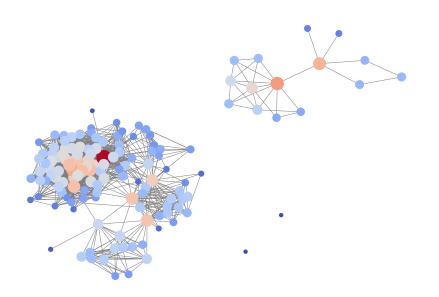

### Betweenness centralities

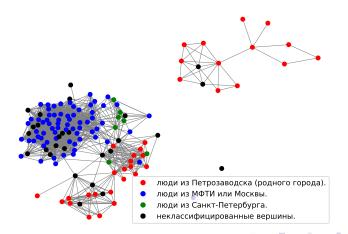

# Pagerank

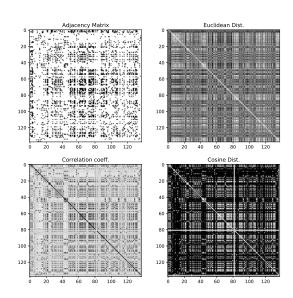

# Assortative mixing

### Assortative coefficients

sex: 0.04 city: 0.07 university: 0.18

# Node structural similarity

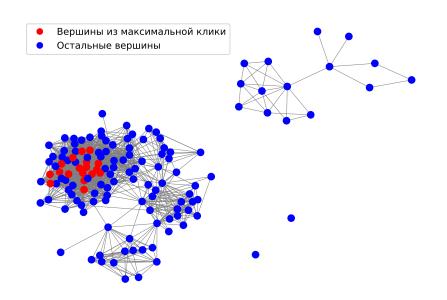

# The closest random graph model

Рассмотрим распределение степени вершины при разных моделях.

model	degree	loglikelihood
	distribution	
Erdos-Renyi uniform model	Bin(n-1,0.5)	-6004.14
Erdos-Renyi binomial model	Pois(22.57)	-1195.32
Preferential attachment model	Power(-3)	-1155.82
